

# Forged in **ADVERSITY** *for* **YOUR** herds **PROSPERITY**

Lot 3 Marellan Bullseye

**Marellan Shorthorns**  
*"Bred for Bos Indicus Cows"*  
**BULL SALE**

**Tuesday 29th Sept 2026**

On Property "Emerald Downs" Emerald

Dear Beef Producers,

It is with great pleasure that we invite you to our 2026 "Bred for Bos Indicus Cows" Bull Sale, online and on-property. The Sale commences at 11am, with inspection from 8am on Sale Day, or any other time by appointment.

It has been exceptionally pleasing to receive so many good reports of the progeny and survivability of our Marellan Shorthorn bulls over Bos Indicus Cows in the last 12 months. It's great to see that your Bos Indicus Cows and our Shorthorn bulls are forming a profitable and potent combination. We continue to strive for Industry Leading Selection Pressure, to instil in our herd more genetic gain and northern industry relevance. We believe that more Genetic progress is made in Adversity rather than Prosperity.

Please Note that this year's sale is both on farm and online, livestreamed through Auctions Plus. Videos of the bulls will be available approx. 5-7 days before, via [www.marellan.com.au](http://www.marellan.com.au) or Marellan Shorthorns Facebook or Auctions Plus. If you are intending on using Auctions Plus on sale day, please ensure that you are registered to do so. In this case we also suggest that you make contact to ensure that your choices will suit your requirements.

**About the Bulls:** On offer will be 46 Shorthorn Bulls. Unfortunately this is a bit reduced this year, as we made some joining errors with environmentally naive bulls. All these bulls have been blooded and have been fully vaccinated with 3-day, Vibrio, Pestiguard and 7 in 1. The bulls have been Morphology Semen Tested and up to date weighs and scan will be available before the sale. We are very pleased with this year's bulls. These bulls represent the very best in Shorthorn genetics, which have been bred for generations to prosper in the Queensland environment. PLEASE NOTE: Marellan Shorthorn bulls are grass-fed paddock bulls, NO GRAIN - NOT EVER. We think that this policy is in the best long-term interests of both our business and yours. This inevitably means that the bulls may have lighter weights and lower scans than you may see at other sales.

Our genetic evaluations are done with BreedPlan's Tropical Composite Register, meaning our genetic evaluations will be done in our backyard, in comparison to our environmental peers.

Yours sincerely,  
Lincoln & Lisa Job and Family

# Sale Information

**Inspection:** Inspection will be from 8am on sale day or any other time by appointment. On Property & Online: The sale will be On-Property at “Emerald Downs”. The Sale will also be on the AuctionPlus selling platform. Video’s of the Bulls will be online by 5-7 days prior to the sale.

**Accommodation:** Emerald has numerous accommodation options.

**Airport:** “Emerald Downs” is situated only 10km from the Emerald Airport. Please call Lincoln (0404 08 34 38) or Lisa (0411 311 323) if you would like us to arrange for you to be picked up from the airport.

**Breeding Soundness:** All bulls will be Semen Morphology tested and examined for reproductive and structural soundness by Wise Repro and Rocky Repro.

**Supplementary Sheet:** Supplementary Sheets will be available late in the week leading up to the Sale. Bulls will be weighed, scanned for EMA, IMF, Marble Fleck and Fat cover. Scrotal measurements have been done by vets with the ‘reliable’ tension measurer, in accordance with the Australian Cattle Veterinarians.

**Delivery:** We will endeavour to help co-ordinate efficient delivery of the bulls where required. Trucks are welcome on sale day. All bulls sold outside of the ticks will be delivered and presented clean to the clearance dip at the vendor’s expense.

**Health:** All bulls have been vaccinated with 7 in 1, Pestiguard, 3-day and Vibrio. All bulls have been blooded with 3-germ. The Central Highlands is ticky country; consequently, all bulls have been exposed to ticks on numerous occasions and will need to be cleared if they are sold to a tick free area.

**Delayed Payment:** Delayed payment may be available to some producers. Please speak to Lincoln prior to sale day.

**Mobile Phones:** “Emerald Downs” has very good mobile phone coverage.

**Directions:** “Emerald Downs” is located just north of Emerald on the Gregory Highway. Please see inside the back cover for a map.

**Sale Bulls:** Sale bulls have been prepared for their working lives, under our strict Selection Pressure polices. They are genuine grass fed, paddock reared bulls that have undergone intense selection pressure. Consequently, they will not have the finish that you may see at other sales. We are determined to ensure that our bulls can survive and thrive in Central, North and Western Queensland, rather than ‘look good’ on sale day.

All sale bulls are registered with the Tropical Composite Register. With ‘Shorthorn Beef’ they have various status ranging from Unregistered Herd Bulls to HBR. If registration status is an issue to you please speak to Lincoln before the sale.

**Semen Rights:** We have collected semen from a limited number of sale bulls. We retain **100% SEMEN RIGHTS ON ALL LOTS**. It is most likely that this will be absolutely irrelevant for virtually all buyers but please speak to Lincoln if you require any clarification.

**GST:** 10% GST will be added to the knock down price.

**Performance figures & DNA Testing:** Performance Figures: Our performance data is Evaluated by BreedPlan in the Tropical Composite Register. We no longer submit any DNA or performance data to IGS to be evaluated against a reference population that is primarily based on cattle in North American whose production system revolves around snow and corn. Since this change we have seen a return to relevance for our Performance Data. BreedPlan’s Tropical Composite Register is based on cattle whose production system is most similar to ours. Please note that some bulls have missing carcase EBV’s; our production system makes it hard to scan within BreedPlan’s preferred window. In these cases, we urge potential purchases to take increased notice of the peer group scan information that will be available in the week prior to the sale. Please see page 32 for the percentile bands for 2024 born calves. Feel free to ask Lincoln if you have any queries.

How to register as an AuctionsPlus buyer

- 01.** Create an account on AuctionsPlus  
 Verify your email and phone number
- 02.** Enter your PIC number, ABN, and business details if applicable  
 Read and accept the user rules and responsibilities
- 03.** Finalise registration by completing the user quiz

### BreedPlan Tropical Composite Self Replacing Index

# Heifer Bull Status

We often get questions about the suitability of individual bulls to use over maiden heifers. Opinions vary greatly as to how much to back off performance for the first calf. Within our herd we try to walk that fine line between applying selection pressure, demanding live calves born unassisted and demanding that that calf is still a contributor to our herd. We want our herd to always lean on the side of greater selection pressure, whereas non-bull breeding herds have the scope to make more decisions for ease of management. The design of your breeding program is up to you, but we seek to simply provide information to allow for wise decisions to be made. Like nearly all breeding decisions, there are multiple influencing factors. The bull used on heifers are only part of the problem or solution. The information boxes for each bull has a box for 'Heifer Bull Status'.

There are different options.

|                         |                                                                                                                                                                          |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>HFC</b>              | This denotes bulls that were born as a Heifers First Calf. Some people use this as an extra guide to bulls suitable to use over heifers.                                 |
| <b>Cows Only</b>        | These are the bulls whose genotype and phenotype are bigger growth and bigger known birth size. We do not recommend that these bulls are used over maiden heifers.       |
| <b>Buyer Discretion</b> | These bulls are bulls that would be fine to use over heifers in some circumstances. Some clients have used bulls successfully over heifers that fall into this category. |
| <b>3 Star</b>           | Bulls that should be OK to use in most circumstances when used over heifers with good growth nutrition and management practices.                                         |
| <b>4 Star</b>           | A safer option for heifers joining assuming that other good management practises have been followed.                                                                     |
| <b>5 Star</b>           | A really safe option to use over heifers. Normally these bulls are lower performance than their peers.                                                                   |

TOP 10% Gestational Length, Rib Fat, Rump Fat & Self Replacing Index. TOP 15% Birth Weight.  
DNA tested Homozygous Polled. A magnificent middle of the road bull. For those that use specific heifer bulls... it doesn't come much better than Bonanza. Super low birth weight and ideal birth shape, but still an attractive beef animal for northern Australia. He has a soft muscle pattern, immaculate structure and is a smooth coated bull. Dam is one of the most elite in our herd. Ida S142 has a low tick burden, high heat tolerance and looks after herself and her calf. Bonanza semen is for sale through Rocky Repro. Please speak to Lincoln if you would like to share in the revenue from future semen sales.

TOP 1% Mature Cow Weight, IMF & Self Replacing Index. TOP 5% 600Wt, Rib Fat, Rump Fat & Terminal Index. TOP 10% Scrotal Size TOP 15% 400Wt. TOP 25% Carcase Wt. Horned. A proper beef bull with a big fat Boofhead. He is thick, wide and deep. His depth of body and carcase shape is magnificent. We will use Boofhead by IVF in our herd. Dam is a highly influential cow, with tremendous weight, doing ability and udder type. And Nicol needs no introduction, one the best performing bulls in the north. 1/4 Belmont. Boofhead is rich in Nicol's characteristics. 3/4 brother to Bullet who sold for \$26,000 in the 2025 sale to Brenton and Emma Sewell.

# PROSPERITY VS ADVERSITY

## Unlocking genetic progress for your herd

*An extract from Beef Central's Sponsored Content 17/08/2026*

**The Strategy of presenting sale bulls with “No Grain – Not Ever” is not just a slogan, it’s the way of doing things at Marellan Shorthorns. Lincoln & Lisa Job, principals of Marellan Shorthorns at Emerald in Central Queensland, are definitely taking the road less travelled ...**

It is in the hard times that people reveal their character. The same is true when it comes to cattle. “The good seasons, with plentiful high-quality feed, shade and minimal parasites don’t really show who is elite. It’s the hard times when cattle truly prove their worth,” Marellan Shorthorns principal Lincoln Job explains. “And this only compounds over generations of selections.”

Breeding Shorthorn cattle in the heat and ticks of Central Queensland automatically sets the Marellan herd apart. But for the Jobs, this location is just the beginning of their breeding program.

“I know why there aren’t many British-bred bull breeding operations in the ticks and heat. Lots of people want to sell bulls here, but not many want to breed them in or for this environment.”

But for those like Lincoln and Lisa, challenging conditions are simply an invitation to do better and try harder. It’s their philosophy that the way to maximise genetic progress is through adversity, not prosperity. And this is where Lincoln believes bull breeding herds should differ from commercial herds.

“In a commercial setting you want your weaners on the best tucker, so the steers can be sold as Bullocks or feeders as soon as possible. Maximising prosperity [of the herd] is the goal of most commercial operations; get them out the door, sooner, heavier and better.” According to Lincoln, **“Cows are like people: they become lazy if you give them the opportunity. Welfare that is unnecessary harms people ... unnecessary ‘cow welfare’ can do the same in a bull breeding herd.”**

### Genetic Gain through Adversity

In the Marellan herd, Lincoln and Lisa believe that adversity helps sort out who can bring about genetic gain and who is the equivalent of a fair-weather friend.

“Chuck ‘em all in at the deep and see who can swim... and then breed from the good swimmers.” As a bull breeding operation, they see their job as working hand-in-hand with the environment to sort out genetics: **get rid of the second-rate genetics and present the superior ones to their clients.** In the Marellan Breeding program, they use this adversity to drive genetic progress in numerous ways.

### Ticks, Heat & Buffalo Fly

Ticks, Heat and Buffalo fly are part of the Central Queensland environment, meaning they are part of the environmental selection pressure that is applied in the Marellan herd.

From a commercial perspective, avoiding ticks through paddock management would be a key goal. But Lincoln insists “we want ticks at strategic times, we want to see who the ‘tick magnets’ are and remove them from our breeding program.

“Without exposure to ticks there is no knowledge, and without knowledge breeding decisions become guesswork.” The aim is to continually select cattle with a lower tick burden. The same goes for Buffalo Fly.”

Heat tolerance is another trait selected for in the herd. Strategic periods of shade restriction and the Central Queensland environment bring the adversity that helps inform their selection choices. This combines well with the favorable heat-reflective coat colour in Shorthorn cattle.

### No Grain – Not Ever

Shorthorn bulls sold from Marellan never receive any supplementary grain; their slogan remains No Grain – Not Ever. Sometimes bull preparation explanations look like they are written by politicians, but at Marellan it couldn’t be simpler: No Grain – Not Ever. Lincoln explains that this isn’t just a marketing phrase, but the breeding philosophy they have built their herd around.

This strategy fits in with their larger philosophy around Adversity. Marellan bulls are also given long exposures to low-quality dry feed and long periods with no animal health treatments. The bulls don’t get weaned into a feedlot or put on the best feed available on the farm. They spend months on deteriorating, dry grass, before being given the opportunity to finish on grazing crop in the immediate lead up to the sale.

## More Weight

At Marellan, Lincoln and Lisa believe that bulls with high-quality Shorthorn genetics alongside environmental relevance, joined to Bos Indicus females, gives the opportunity for more weight and heavier progeny at younger ages.

Lincoln's saying is that elite genetics (from both sire & dam) + Hybrid Vigour = More Weight. Proof of this was once again put on display at the 2026 Clermont Show Fat Cattle section. With 609 cattle exhibited from 37 exhibitors, Marellan Shorthorns took out the award for Most Successful Exhibitor for under 15 head (25 Exhibitors).

Pictured below is Champion Grain Fed Animal – Marellan Shorthorn x Brahman F1 bullock 815kg, 2 tooth Bullock.

## More Maternal

As good as hybrid vigour is in an F1 bullock, to ensure genetic gains are passed on year after year, the best gains from hybrid vigour come through maternal F1s and maternal F2s. According to Lincoln, "the combination of the Shorthorn and the Brahman has been the backbone of the Northern Cow herd for over 50 years. Crossing with Marellan Shorthorn bulls gives more fertility, more growth and more longevity."

Pictured above is F2 Shorthorn cow alongside her F3 calf at Appleton Cattle Co's "Craven", Alpha. The calf weighed in at 390kg. Both cow and calf are sired by Marellan Shorthorn Bulls. The other cow is 1/4 Brahman.

## More \$\$

The performance gains through elite genetics, Hybrid vigour, meat quality and market options for Shorthorn genetics, has allowed clients of Marellan Shorthorns to make more \$. A recent example from client, Dugald Maloney, illustrates this perfectly. His Marellan Shorthorn X Droughtmaster weaner heifers sold for an 80c premium at CQLX. Client feedback indicates that Marellan Shorthorn bulls are producing progeny that top markets and satisfy requirements of premium markets.

## Bulls Done Differently

**The Marellan Shorthorns – bred for Bos Indicus Cows Bull Sale**  
will be held on property, "Emerald Downs", Emerald on  
**Tuesday 29th September.**

ID: JOBV188 Born: 13/08/2024 (25 mths) Colour: Red

S: ROYALLA TRIGGER M246  
S: DPK ROYALLA Q143 (P)  
D: DAMO PARK MELODY 4TH

S: MARELLAN SID L136  
D: GOBOTHERY R191  
D: GOBOTHERY DAM

TOP 5% Mature Cow Weight & Self Replacing Index. TOP 25% Terminal Index.

Polled. Another easy doing red bull, and as his name suggests has a good rump. Butt is a descendent of both Sid and Trigger, two high class bulls that are at the top of the tree for northern relevance.

## MARELLAN BUBBLY V244 (H)

ID: JOBV244 Born: 04/08/2024 (25 mths) Colour: Roan

S: ROYALLA TRIGGER M246

**S: DPK ROYALLA Q143 (P)**

D: DAMO PARK MELODY 4TH

S: GOBOTHERY SIRE

**D: GOBOTHERY P241**

D: GOBOTHERY DAM

### TOP 5% Mature Cow Weight & Self Replacing Index.

**Horned.** Easy doing bull with a great body. I like his mid-maturity pattern. A real middle of the road bull to produce bulls, feeders and daughters to retain. Bubbly is really versatile; he keeps his body condition well. His sire is a full brother to the influential Royalla Winchester.

### August 2026 Tropical Composite BREEDPLAN
